

## Penofin® Hardwood Formula

- Especially formulated to penetrate dense hardwoods
- Added ultraviolet protection
- Transparent natural tone allows the beauty of wood to be seen
- Used on some of the largest theme park boardwalks in the world
- Advanced mildew protection
- Not a surface film that will crack, bubble, or peel

Only Penofin's Hardwood Finish can penetrate dense hardwoods that need nourishing and stabilizing. This unique formula penetrates deep into the wood fibers and does not create a surface film. Unlike high-solid stains that simply coat the surface, Penofin's Hardwood Finish, using sustainably harvested Brazilian Rosewood Oil, is the choice of wood experts who know that wood penetration is key to longevity and beauty. Penofin allows wood to breathe, important in working with exotic hardwoods such as mahogany, teak, Ipe, Brazillian Redwood, and many other species. Only Penofin Penetrating Oil Finish can meet the needs of hardwood in fiber protection, penetration, stabilizing, and nourishing.

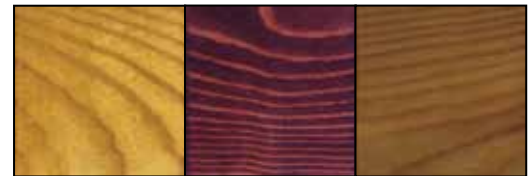

## Penofin® First Step Prep For Hardwood

- Removes mill glaze
- Formulated for hardwoods
- Easy to apply
- Fast clean up
- Opens the wood's fibers to allow maximum penetration

## Log On®

- For timber frame and log homes
- Added protection
- Sustainably harvested Brazilian Rosewood Oil
- Three tones

Aspen

Pocono

Whistler

LOG ON has 99% UV protection, the highest rating of any transparent finish. LOG ON has the finest mildew protection found anywhere. LOG ON is a semi-transparent wood finish that penetrates deeper than any other transparent stain. It really nourishes and protects the wood. You'll use LOG ON in high altitude environments where sun, wind, rain, and snow are toughest on wood. LOG ON is perfect for log homes and timber frame properties that experience fierce weather conditions! From the Appalachians and the Ozarks, to Whistler and the Rockies, from the Tetons to the Wasatch, and to the Blue Ridge Mountains and beyond, LOG ON!
