Penofin® Marine Oil Finish

- 99% ultraviolet protection
- Protects and beautifies like no varnish can
- Highest-quality mildew protection
- For use on boats, cabins, cockpits, decks, railings, and docks
- Safe and easy to use
- Available in a natural tone

PENOFIN's Marine Oil Finish seals and protects the mill bright beauty of natural wood, giving it that hand-rubbed look mariners prefer. Multiple coats may be wet-sanded to build a lustrous self-filling, hand-rubbed finish, or simply apply product and remove excess with a nap-free cloth for a flat matte finish. Due to its unique penetrating abilities, any area that is scratched or stained may be repaired using the wet-sanding method. Penofin's Marine Oil is nonyellowing, nondarkening and fast drying. No more sanding, scraping or stripping. Eliminates the cause of cracking and peeling, allowing product to penetrate deeply with Brazilian Rosewood Oil to enhance and protect your valuable wood. Penofin Marine Oil is easy to touch up. Just wipe on, allow it to penetrate the pores of the wood to feed and protect from the sun's harmful rays, then use a cloth to remove excess. Enhances natural wood like no varnish can. Don't let the varnish cycle trap you into spending sailing time scraping off layers of finish. Feed your wood...use Penofin Marine Oil Finish with Brazilian Rosewood Oil for the wood on fiberglass as well as wooden boats. Protects and enhances docks too.

Penofin® for Pressure-Treated Wood

- Formulated to bring out the natural beauty of pressure-treated wood
- Formulated in three natural wood tones
- One-coat formula
- Meets EPA guidelines to lock in carcinogens in CCA wood
- Great performance on ACQ wood.
- 99% ultraviolet protection

Rainier

Tahoe

Yosemite

Pressure-treated Penofin is formulated to restore the beautiful wood tones homeowners want. It comes in three natural tones and penetrates pressure-treated wood like no other stain. Brazilian Rosewood Oil penetrates and stabilizes the wood fibers for control of carcinogenic releases, as stated by the Environmental Protection Agency. They recommend using a deep, low-solid, penetrating oil finish.

Penofin's pressure-treated formula contains sustainably harvested Brazilian Rosewood Oil to give the wood a natural tone and texture. Suitable for all types of pressure-treated wood. Penofin pressure-treated tones are: Rainier, with golden honey tones to bring out the rich, smooth look of lighter woods; Tahoe, with rich cinnamon tones for that rich, bold look; and Yosemite, showing warm, dark brown tones that complement natural surroundings. Best of all, Penofin pressure-treated oil finish is so easy to apply.
